MEMORANDUM FOR: [REDACTED]

OC-O

25X1

SUBJECT : [REDACTED] ADP Requirements

REFERENCE : OC-O/D-M74-400, dated 5 November 1974

1. We appreciate your advising us of your ADP requirements. As discussed with [REDACTED], the allocation of OJCS resources for FY-1975 has not yet been received.

2. The CDS support requirement should be documented as a project proposal to provide the OC ADP Committee with the information needed to review the requirement with a view to early implementation. We have been informally advised that customers will probably have to fund any additional VDU terminals needed during FY-1975. The 256K virtual CPU core is available for call-up at any time. Availability of the 15 M-BYTES of temporary P space may prove to be a problem.

3. Cost attribution systems for secure and unprotected telephone systems have not yet been approved. Implementation of ADP projects related to cost attribution should be delayed until the costing systems have been approved.

4. A PRISM project number is being requested for the Financial Resources Information Support (FRIS) project. The sub-number "02" has been established under Project [REDACTED] and [REDACTED] has been advised that PRISM project number 2240002 should be used for FRIS pending assignment of a primary number.

5. Discussions with Messrs. [REDACTED] indicate that the requirement for additional cylinders may be considerably greater than the five requested. Due to the magnitude of the resources required for use of the OJCS PERT project, it is requested that this requirement also be documented as a proposal for consideration by the OC ADP Committee. You should be prepared to delay implementation of this requirement such time as OJCS resources can be re-allocated.

[REDACTED]
Executive Assistant, OC
